MY MEASURE

Cut pieces of thread varying in length, for example the length of a finger, a foot, or a fathom (arms outstretched). Use these threads to measure things foud in or aroud the house. How many fingers or feet is the hallway carpet? Why does the child get different results from those of the adult?

Get a piece of thread one meter in length. Use this to measure the circumference of a tree, the length of a fence, or the size of a sandbox. Where does the one-meter thread reach on your bodies?
