

THINKING OUTSIDE THE BOX: HOW PHYSICAL ACTIVITY AFFECTS CHILDREN'S LEARNING

Kantomaa ym. 2018, Fakta Express 1A/2018: Koulupäivän aikainen liikunta ja oppiminen

Being physically active and learning are interlinked in various ways. The games collected in Outside the Box provide tips and ideas for shared physical activities between adults and children that inspire learning. The Outside the Box games can be played at home, even in small spaces, using household items, and they can also be played outside.

Papunetin kuvapankki, papunet.net, Sergio Palao / ARASAAC

The picture of the lightbulb presented throughout the game instructions helps you think outside the box and figure out at least one skill that the game strengthens. Of course, many other skills are enhanced at the same time, without you even realising it!

Have fun playing together!
